# Millenium Chair with 3 Motors

The Millenium Chair was designed to offer your patients the best possible level of comfort. We paid particular attention to the careful selection of Bultex foam, renowned for its comfort and high degree of resilience.

The foam is covered in high-strength leatherette, with over 70 colours options! Combined with an innovative pantograph base, the three high performance electric actuators ensure market-leading clearance and movement.

The multifunctional pedal, controlling the up/down, Trendelenburg and back movement, is intuitive to use.

The headrest is an integral part of the chair's design, and provides support and comfort to the patient.

The back movement, assisted by an electric actuator, facilitates a full examination table position.

Maximum height at the end of the legs: 125 cm. Working with heels has never been this easy!

The lowest seat position (55 cm), allows all your patients to access the chair with ease.

Multifunctional pedal with joystick control and functional «memory» buttons..
